

1. Create a page which displays page visits on the home page like this
You have visited this page 'n' times.

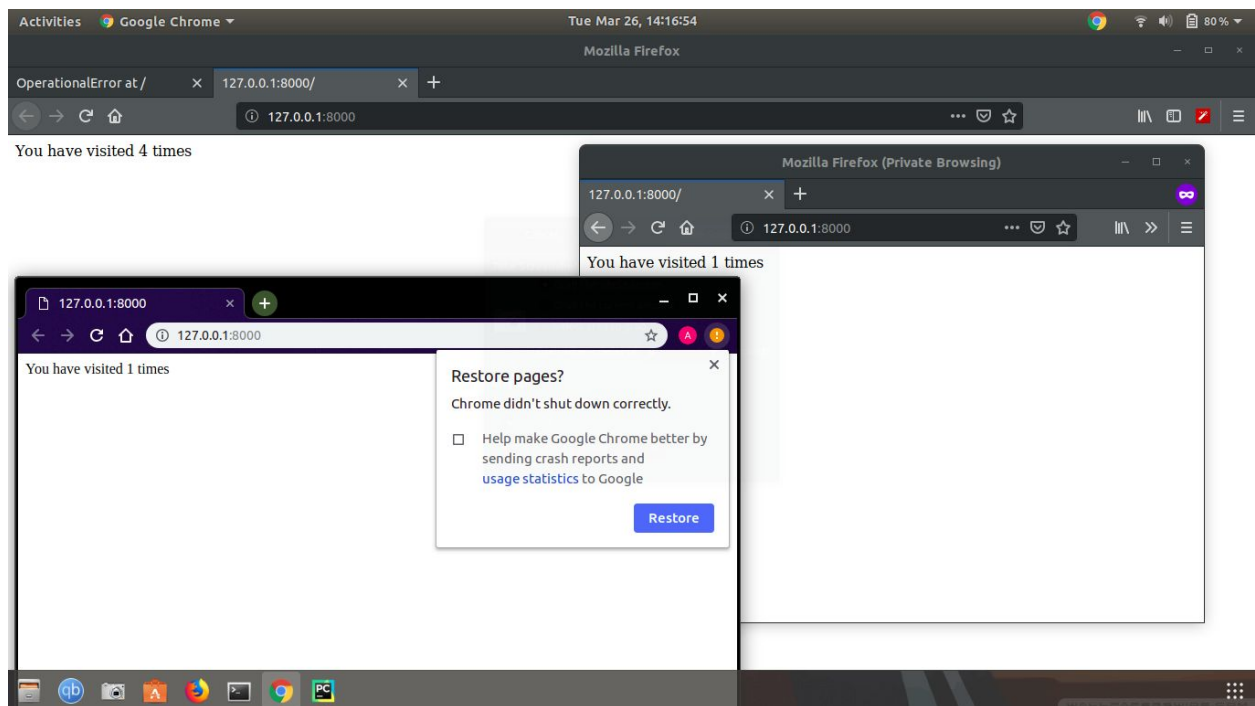

(Where n is the number of times a user has visited the home page).

check what happens when you do this exercise from

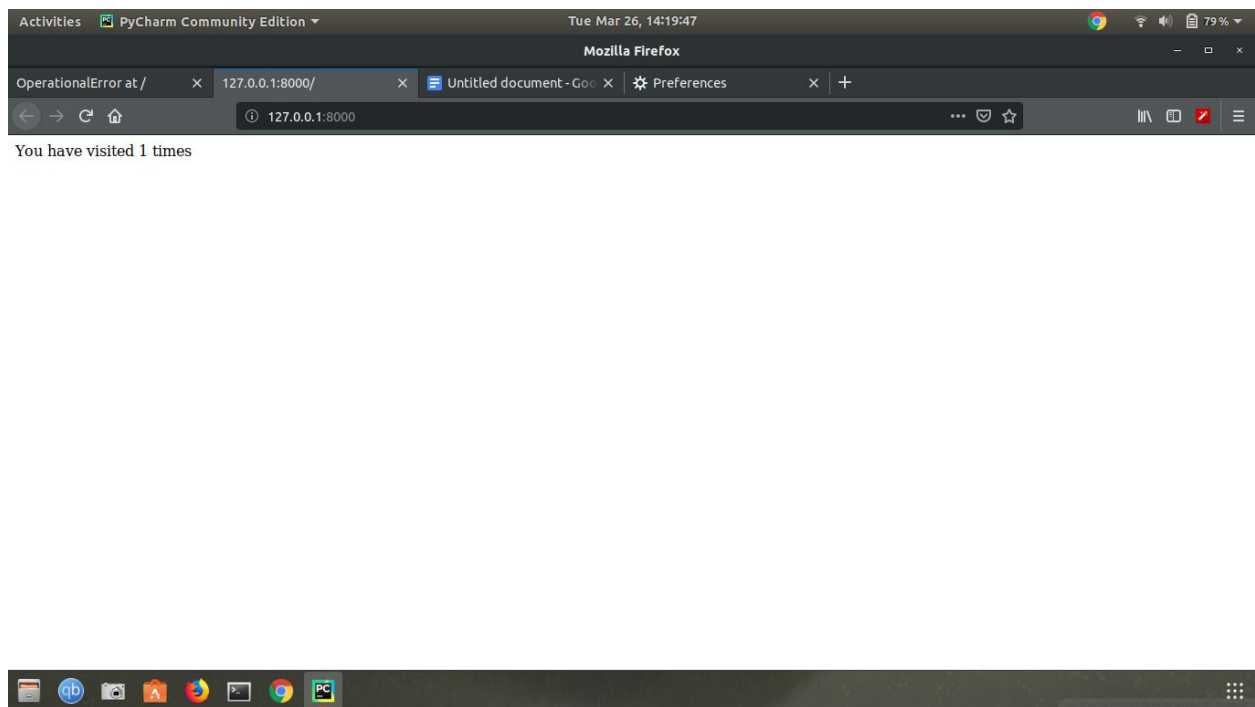

- an incognito mode.
- a different browser.
- on clearing the browsing history.

```
from django.http import HttpResponse  
from django.shortcuts import render
```

```
def checking(request):  
    count = 0  
    request.session['count'] = request.session.get('count', 0) + 1  
    return HttpResponse('You have visited '+str(request.session['count'])+' times')
```

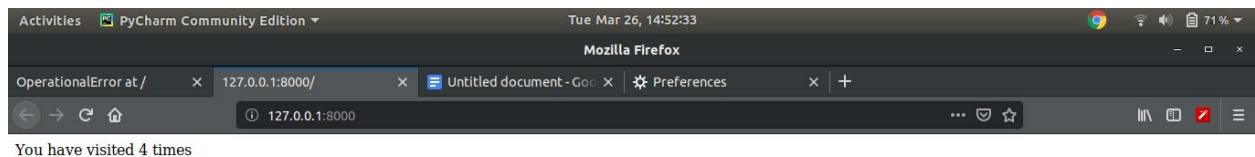

After clearing history

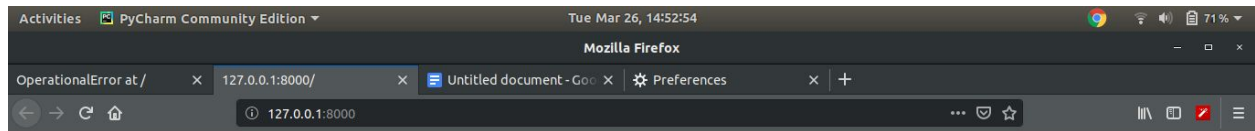

2. Set the custom expiry of 5 min to your session

```
from django.http import HttpResponseRedirect
from django.shortcuts import render
```

```
def checking(request):
    request.session.set_expiry(5)
    count = 0
    request.session['count'] = request.session.get('count', 0) + 1
    return HttpResponseRedirect('You have visited '+str(request.session['count'])+' times')
```

You have visited 1 times
